

eLINK2Palm

Synchronise data from your eLINK 5 applications with your Palm via Internet, thanks to eLINK2Palm

Starting from your HotSync synchroniser, you can transfer your business relations' data, your tasks and your schedule for a given interval of time.

With the options, you can fine-tune your transfers to have just the information you need in your Palm.

For example, a synchronisation can include all undone Actions of your Agenda, for a period starting 10 days ago, to 15 days in the future.

Those Actions will be displayed in your Palm with all the information you have entered. You can also synchronise the Contacts linked to recent Actions in order to take only "active" business Contacts.

eLINK2Palm can also be used by several users on the same desktop, with a different profile for each one. Everyone will have his own configuration accessed simply with the eLINK login.

eLINK2Palm is the easiest way to make all your business information available wherever you want.

Use your Schedule and the Contacts of your company databases in your PDA

Synchronise the data from wherever you are via Internet

Simple installation (on a Palm conduit)

Bi-directional communication: additions and modifications entered in your Palm are uploaded to your eLINK virtual desktop!

Supported models: Palm III, Palm IIIc, Palm Vx and 505m
